

SpreeSuite

A Unified Suite of Business Applications

A product by Techfoot

SpreeSuite

SpreeSuite is a modular, cloud-enabled business management platform built by Techfoot to simplify **recurring billing, payroll, workforce management, and accounting**, alongside other essential business functions. With options for **cloud or on-premise deployment**, robust **integration through web APIs**, and **comprehensive user management** (permissions, roles, groups, and accounts), SpreeSuite helps businesses streamline operations, improve financial visibility, and collaborate effectively across teams.

This brochure mainly showcases the capabilities for BillSpree which is a subscription billing application within the ecosystem of SpreeSuite.

BillSpree Functional Modules

Core Billing Modules

1. Subscription / Recurring Billing Management

- a. Create, deactivate, re-activate subscriptions.
- b. Metered / usage-based billing.
- c. Handling different billing cycles.

2. Product Catalog, Pricing & Packaging

- a. Definition of billing components.
- b. Definition of plans (pricing rules).
- c. Supporting multiple plans for a single package.

3. Billing & Invoicing

- a. Generating recurring invoices automatically.
- b. Advance invoices, consolidated invoicing (for B2B).
- c. Invoice customization (templates, branding).
- d. Adjustments, credit notes.

4. Customer Self-Service

- a. Customer subscriptions and bills can be viewed.

Integration Options

- 1. **Webhooks** → notify external systems in real time when key events occur.
- 2. **Web APIs** → allow third-party systems to integrate securely and exchange data programmatically.
- 3. **Import/Export** → handle bulk data through CSV files for easy migration.

System Requirements (for on-prem vanilla installation)

Server Requirements

4. App Server

- a. CPU : 8 Core
- b. RAM : 16 - 32 GB
- c. Storage : 100 GB

5. Database Server

- a. CPU : 8 Core
- b. RAM : 16 - 32 GB
- c. Storage : 100 GB

6. Logging Server

- a. CPU : 8 Core
- b. RAM : 16 GB
- c. Storage : 200 GB

Client Requirements

7. Web Browser

- a. Latest versions of Chrome, Firefox, Edge, or Safari.

8. Screen Resolution

- a. 1366 × 768 px

9. Processor & Memory

- a. Dual-core CPU,
- b. 4 GB RAM (standard office laptop/desktop).

Billing Process Flow

Package Setup

We setup our billing components, subscription related inputs, meter related inputs, accounting related configurations for billing.

Plan Setup

We setup the billing rules for all components.

Subscription Setup

We create subscriptions attaching them the desired package, plan, batch, subscription properties and meter.

Bills Computation

Meter readings and any other inputs are gathered and fed into their respective bills and the assigned billing rules are applied.

Bills Publishing

PDFs for each bill is then generated using the provided billing template.

Bills Distribution

Bills can then be distributed through emails to respective customers.

Payment Settlement

Once payments are uploaded into the system, they are settled as per the payment priorities defined against billing components.

Late Fee Charges Application

In case we want to apply late fee sucharges to customers after payable due dates, we can define late fee application rules.

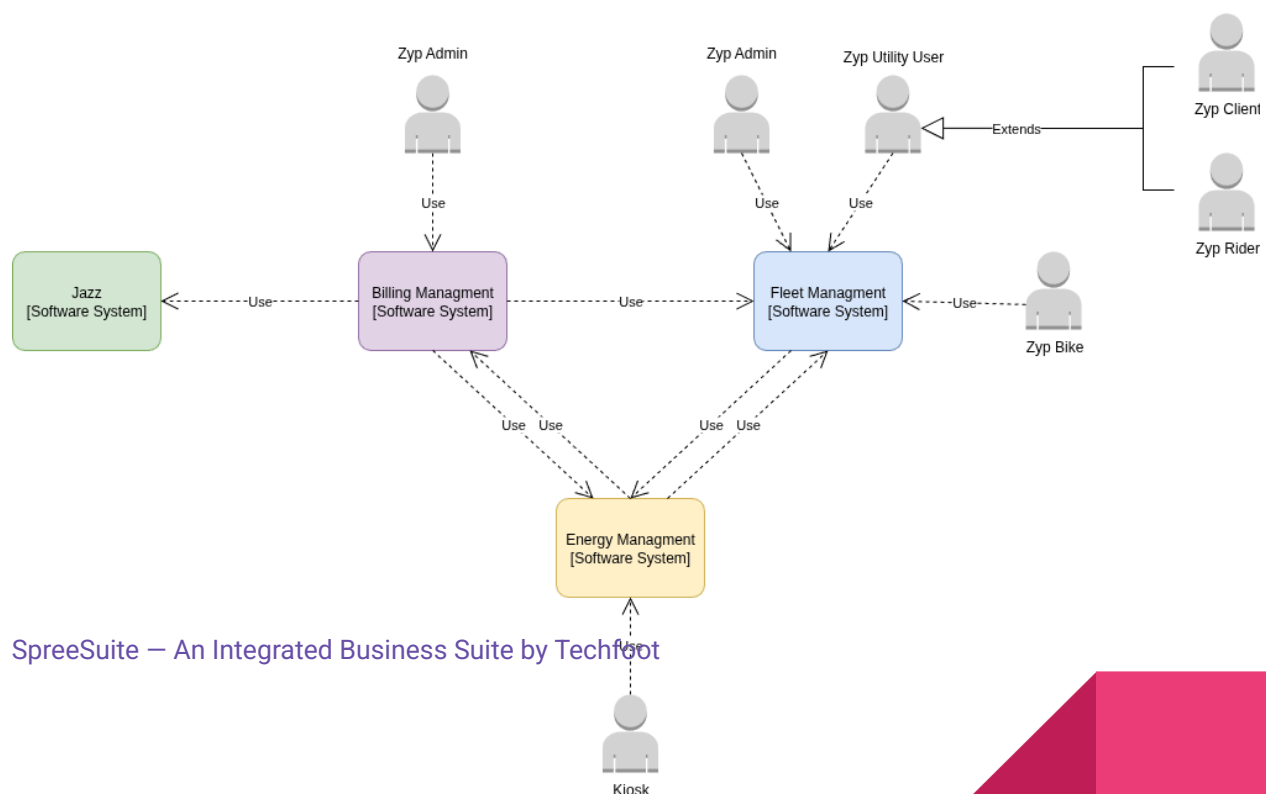

Customer Spotlight: Zyp Technologies (<https://zyptechnologies.com>)

Zyp Technologies is a pioneer in Pakistan's e-mobility space, building swappable-battery motorcycles and a nationwide battery-swap network that makes electric transport practical and affordable.

Our **BillSpree billing system** powers Zyp's **postpaid model for B2B fleets and B2C riders** through deep integrations across their ecosystem:

- **Fleet Management System** → Odometer readings are captured for distance-based billing.
- **Energy Management System** → Swap counts are tracked to calculate energy usage.
- **Jazz Payments** → Mobile wallet payments are processed and settlements are recorded directly into BillSpree.
- **API-Driven Billing** → All usage and payment data flows into BillSpree via web APIs. Bills are calculated, posted, and automatically delivered to riders through mobile apps and web portals using webhooks.

This end-to-end setup ensures **accurate, automated, and real-time billing** that keeps pace with Zyp's innovative e-mobility business model.
